For each function, add at least one example to the docstring and complete the function body.

1. def count_uppercase(s):
   
   *** (str) -> int

   Return the number of uppercase letters in s.

2. def all_fluffy(s):
   
   *** (str) -> bool

   Return True iff every letter in s is fluffy. Fluffy letters are those that appear in the word 'fluffy'.

3. def add_underscores(s):
   
   *** (str) -> str

   Return a string that contains the characters from s with an underscore added after every character except the last.
